DISASTER RECOVERY & SECURITY

At Pinnacle, we help you keep your IT infrastructure secure.

Having the right disaster recovery and security plan will help you expect the unexpected, reduce costly downtime, and ensure your ability to recover data and operations quickly. A flexible and affordable disaster recovery and security plan, particularly one that addresses system redundancy and accessibility, will help you stay in business.

Through Pinnacle's Disaster Recovery & Security Offerings, you can rest assured that the infrastructure, servers, applications, networking, and storage in which you have invested are secure. Pinnacle's solution specialists utilize years of experience and key partnerships to find our customers the right disaster recovery and security offering.

The Right Disaster Recovery Plan — Tailored to Your Environment

In today's business climate, high availability systems are no longer a luxury but a necessity. Regulatory compliance requires the need for proper data retention and life cycle management. Ensuring continuous and secure access to vital systems, applications and data can be a daunting challenge. Implementing a sound disaster recovery plan is critical in reducing downtime, and having the right security measures in place protects your critical data from unauthorized access. Your overall disaster recovery and security plan should be one that is affordable, flexible and effective. It should give you peace of mind and the assurance that your company is protected day to day, and will continue to operate during and after any unexpected event.

Pinnacle can help deliver this assurance and peace of mind through a full spectrum of flexible offerings. From developing a disaster recovery plan to hosting your production environment, Pinnacle has a solution to meet your requirements. Our solution specialists can assist you in developing a formal disaster recovery plan, and then test that plan to ensure success.

SOLUTION HIGHLIGHTS

Be Proactive
An agile, affordable disaster recovery and security plan will help you stay in business.

Outstanding Support
Pinnacle's Solution Specialists have decades of experience and certifications to give you peace of mind and assurance that your company is protected and prepared day to day.

Business Continuity
The continuity of your business operation and data integrity depends on an IT infrastructure designed for accelerated disaster recovery.
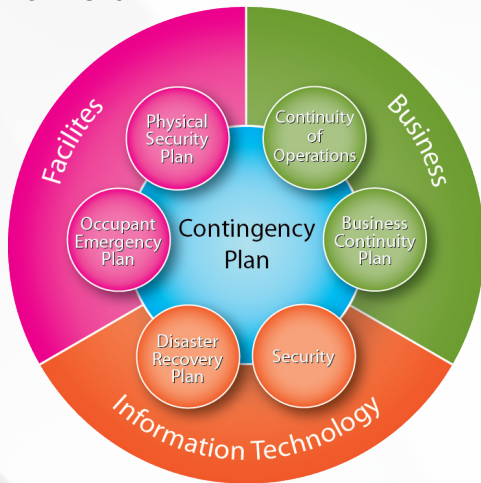

Collocation and Managed Services
Pinnacle has partnered with several collocation providers across our coverage areas to offer solutions ranging from simple collocation of your hardware infrastructure to fully managed application hosting services.

Be Prepared
Third-party security experts are available from Pinnacle to ensure that your data is safe and will not be compromised.

Through our high availability partners, we can build your infrastructure to be resilient and fault-tolerant to minimize downtime. There are also options to utilize Pinnacle's data centers for disaster recovery through our shared infrastructure model. This offering is very cost effective for companies that do not wish to manage a second, redundant environment.

Hosting Services for Complete System Redundancy

For some companies, high availability is simply not enough to meet their service level agreements. For these firms, downtime is not an option, and having completely redundant IT systems in another physical location is the only solution acceptable. Building on our high availability solutions, we have made a significant investment in technological resources, data centers and telecommunications to provide completely redundant services. Pinnacle offers a number of collocation and hosting options to fit your environment. These facilities are fully redundant and can extend Service Level Agreements (SLA) of 99.9% uptime, to ensure your critical applications remain available seven days a week, twenty-four hours a day.

Ensure Your Information is Safe Through our Security Assessment

Understanding the nature and severity of threats is critical for effective prevention and response. To make informed decisions, executives need insight into system exposure, the potential for loss and the impact on their enterprise mission. Pinnacle security specialists are available to ensure that your data is safe and will not be compromised. We focus on:

- Security Consulting
- Device Management
- Vulnerability Assessments
- Compliance
- Security Monitoring

ABOUT PINNACLE

Pinnacle offers proven disaster recovery and security solutions that is backed by more than 25 years of experience delivering end-to-end technology solutions that drive value to the business and return on your investment. Our engineers and project managers are local, accessible and collectively hold over 100 professional certifications in various disciplines, products and services.
